

Passwords

How many should I have and how can I remember them?

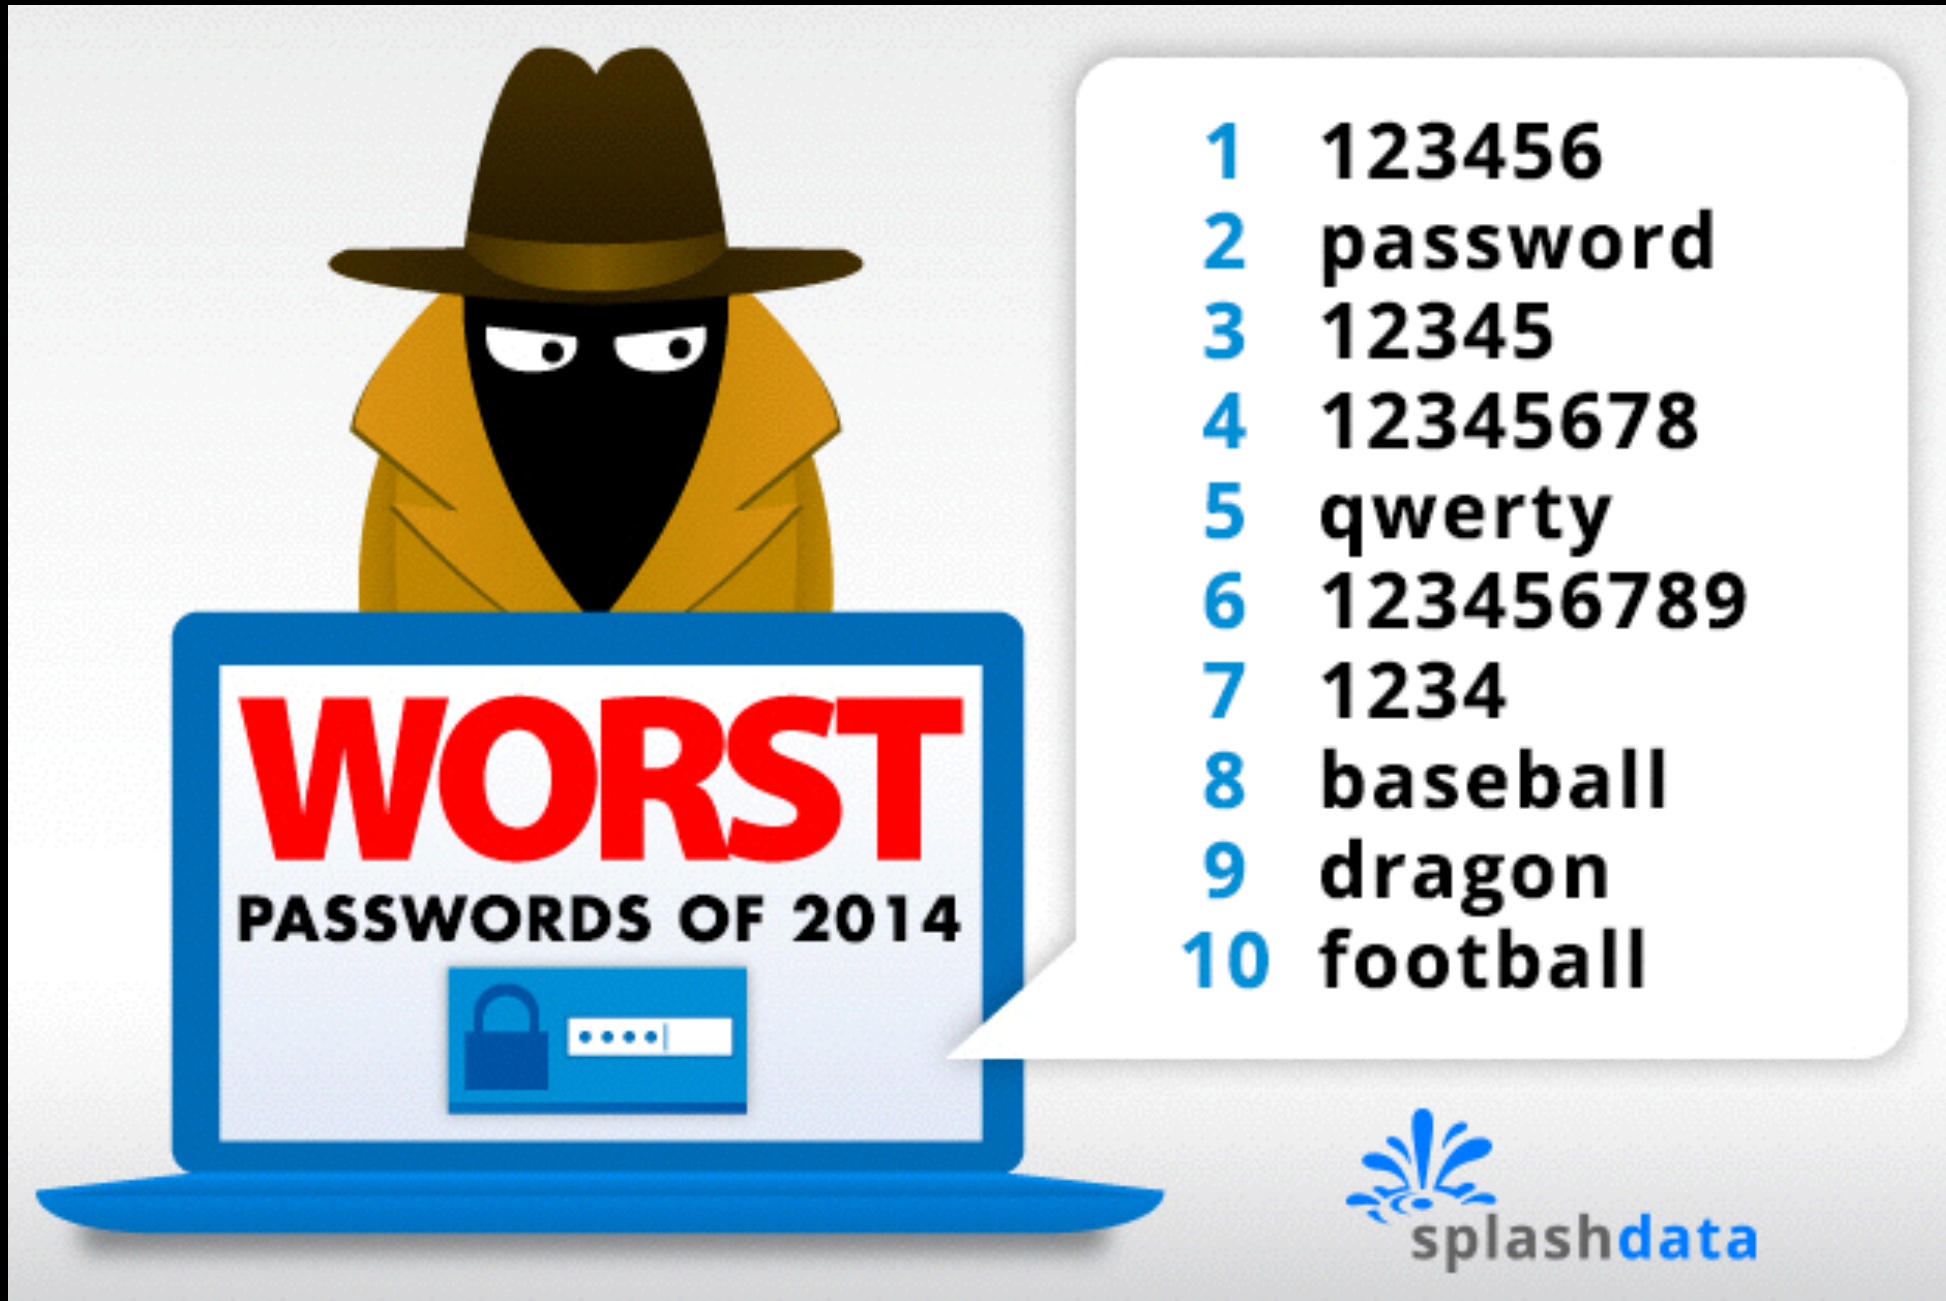

Limit your passwords

- One password is easier to remember than many.
- **Except** for log-ins that access **money** e.g. banking, PayPal, etc try to **use the same one...** but still make it a secure one.

Don't have.....

Bad Passwords

Someone discovered my
PASSWORD.
Now I have to rename my dog.

Good Passwords

i shall use strong passwords.

i shall use strong passwords.

i shall use strong passwords.

i shall use strong passwords.

I 5ha!! u53 \$4r0ng-p@5sw0rdz!

x	0	x
0	x	x
0	0	x

Strong passwords are a minimum of 8 characters in length
& include uppercase, lowercase, numbers & special characters.

Tips to create strong passwords you can remember.

- Start with a base word phrase or line from a song and take the first letter from each word.

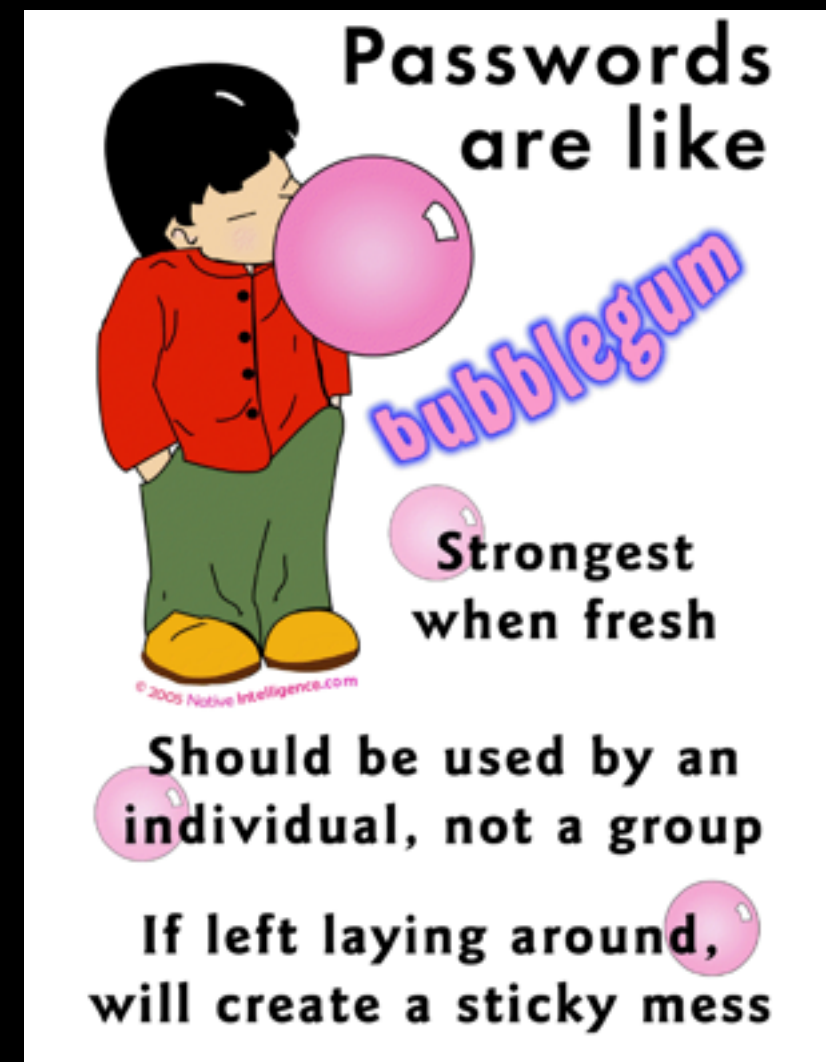

e.g. *If the Shoe Fits, Wear It:* **itsfwi**

- You can lengthen the password by adding the site name e.g. **itsfwipaypal**

- Swap letters for numbers and symbols

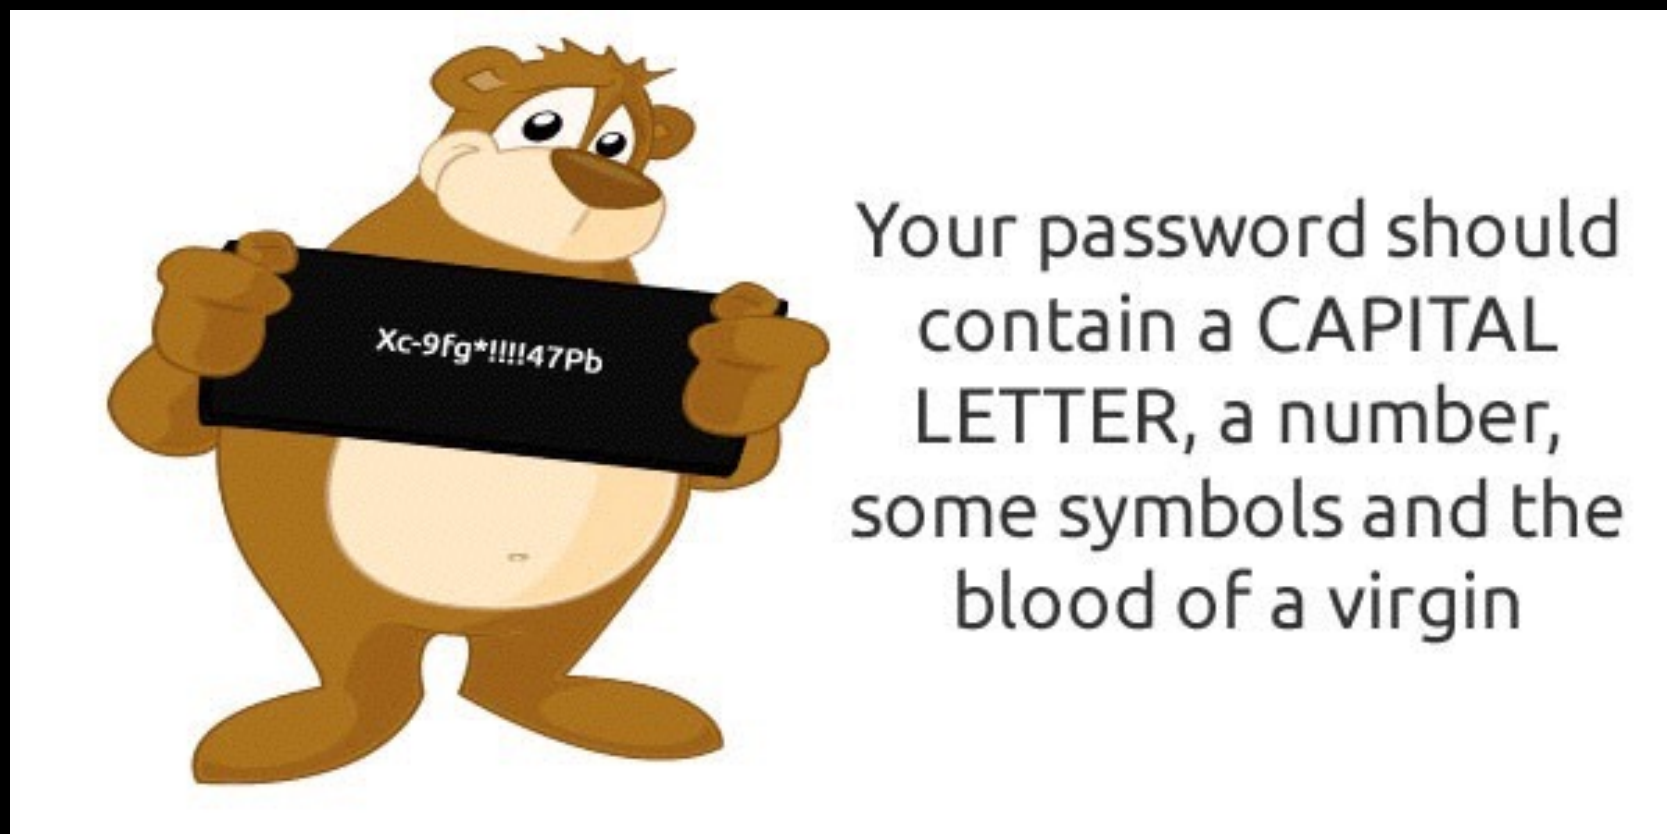

e.g. **itsfwipaypal1t2fw1p@yp@l**

- Change important passwords regularly.

Remembering my passwords

- Once you have a secure password use it for all your accounts that don't involve money.
- Select a **different** password for each bank or account that uses money.

Apps to help you remember

- Many apps are available to help you store your passwords securely both on the iPad and Mac.
